BANDARU GURU CHARAN KANTH SWAMY

Ph no: 9347437399 | charanbandaru869@gmail.com | linkedin.com/in/charanbandaru/

Career Objective

Motivated DevOps Engineer with practical experience in Linux, Shell scripting, and Git for efficient system management. Skilled in setting up CI/CD pipelines using Jenkins, build automation with Maven, and containerization using Docker. Proficient in AWS cloud services to automate deployments and improve application performance.

Technical Skills:

Languages:	Java, Shell Scripting
AWS Cloud:	EC2, S3, VPC, IAM, Lambda, SNS, SQS, EBS, Load Balancer, RDS, DynamoDB, CloudWatch, Cloud Shell
DevOps tools:	Git - VCS, GitHub, Jenkins - CI/CD, Docker - Containerization, Maven - Build
Operating System:	Linux (Ubuntu)
Database:	Oracle SQL

Education

Bachelor of Technology: Sai Ganapathi Engineering college Affiliated with JNTU G-V 2021 - 2025
Computer Science and Engineering CGPA:7.25 Visakhapatnam, AP

Projects:

- **Load Balanced Web hosting with NGINX on AWS:** (Technologies: AWS EC2, NGINX, ASG, ELB, Linux, Security Groups)
  Hosted a static website on multiple EC2 instances using NGINX for high availability. Configured an Elastic Load Balancer to distribute web traffic and ensure zero downtime.
- **AWS Serverless File Upload & Notification System:** (Technologies: AWS S3, AWS Lambda, AWS SNS, IAM)
  Designed and deployed an AWS serverless file processing system using S3, Lambda, and IAM, enabling real-time, automated handling of file uploads and event-driven workflow automation. Integrated AWS SNS to deliver instant notifications to users/admins on new uploads, ensuring scalable architecture and enhanced user experience.
- **Jenkins Pipeline Automation and Load Balancing:** (Technologies: Git, GitHub, Maven, Jenkins)
  Developed and managed multiple Jenkins pipelines with customized pre- and post-build actions, optimizing CI/CD workflow efficiency. Configured master-slave architecture to distribute build loads, enhancing resource utilization and overall system performance.

Internship:

Artificial Intelligence Intern

- **Face Recognition Models**: Implemented face recognition algorithms using OpenCV and Pillow, improving identification accuracy.
- **Image Classification & Data Analysis**: Leveraged AI techniques and data science tools like NumPy, Pandas, and Matplotlib for image classification and data visualization.
- Python Proficiency: Applied Python libraries to solve AI problems, focusing on image processing and machine learning.
-

Training & Courses:

Java Full Stack with DevOps - JSpider Training Institute **January 2025 - November 2025**

- Completed hands-on training in full-stack development, cloud computing, automation, and DevOps tools. Gained practical experience in software deployment, system administration, and scalable enterprise solutions.

Certificates

- Java Full Stack with DevOps Course - Jspider Training Institute,2025.
- **Internship Certification in Core Java** – SkillDzire
